

New !

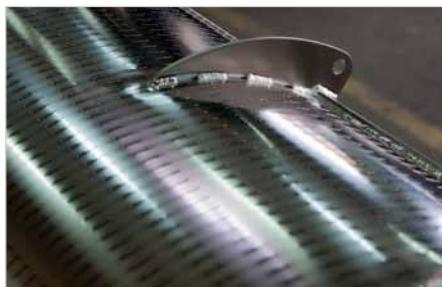

PSP wine presses are now equipped with a new electropolished drum, which is now a standard equipment of the following wine press models:

- ▶ PSP 5
- ▶ PSP 8
- ▶ PSP 10
- ▶ PSP 12
- ▶ PSP 16

Electropolished surface characteristics:

- ▶ with electropolishing all impurities of the basic material are removed
- ▶ material surface irregularities are evened and cleaned
- ▶ glossy and shiny surface
- ▶ distinctively reduced surface roughness
- ▶ increased resistance to corrosion
- ▶ extended product life

Advantages of drums with electropolished surface:

- ▶ sticking of grape pomace to the press drum is reduced, which consequently leads to a better flow of must and liquid through drainage holes
- ▶ better and faster cleaning of the drum, which also results in reduced water consumption
- ▶ reduced possibility of building of coats on the material
